UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

International General Certificate of Secondary Education

MARK SCHEME for the October/November 2008 question paper

0620 CHEMISTRY

0620/02

Paper 2 (Core Theory), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the October/November 2008 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

		IGCSE – October/November 2008	0620	2	
n n n	on-met on-met on-met on-met	al; al;		[5]	
tl A	metallic character decreases (across the table)/metals on the left and non-metals the right ALLOW: metals get less reactive (across the table)/metals conduct better across table)				
(c) (•	trons shown in shells as 2,8,1 OW 2,8,1		[1]	
(i	i) + e/	electron (on the right)		[1]	
(d) s	oft; incr	ease; lithium; basic;		[4]	
				[Total: 12]	
carbon mo ALLOW: c		dioxide → combustion of fossil fuels containing sulp nonoxide → incomplete combustion of fossil fuels; carbon monoxide → car exhausts oxides → car exhausts;	hur;	[3]	
(b) (, , ,	gen is added OW: electrons are lost (from sulphur dioxide)		[1]	
(i		OW 19-22%		[1]	
(ii	i) neut	tralisation		[1]	
(iv	crop nitro fertil	two of: os remove nitrogen (or phosphorus or potassium) fro ogen or essential elements etc. removed when crops lisers provide nitrogen or essential elements or nutri lisers improve plant growth or yield;	s harvested;	[2]	
(\	,	nonium nitrate Γ: ammonia nitrate/ammonium salt/nitrate salt		[1]	
				[Total: 9]	

Mark Scheme

Syllabus

900		mark conomic	-	
		IGCSE – October/November 2008	0620	2
3 (a) (i)	heat	ing (calcium carbonate in a furnace)		[1]
(ii)	CaC	$O_3 \rightarrow CaO + CO_2$		[1]
(iii)	ALL	ralising (acid) soil/neutralising industrial waste DW: for making mortar/for making limewater : for limewater		[1]
(b) (i)	flask	nometer; ; suring cylinder;		[3]
(ii)	(1 m	um carbonate + hydrochloric acid → calcium chloric ark for correct reactants; 1 mark for correct product DW: hydrogen chloride in place of hydrochloric acid	s)	e + water [2]
(iii)	86s ALLO	DW: between 81 and 90s		[1]

Syllabus

Mark Scheme

(iv) slope of graph steeper and always above other line; graph flattens out at 80 cm³ gas;

(v) (speed) decreased/less/slower; (speed) increased/more/faster;

[Total: 13]

	Page 4				Paper
			IGCSE – October/November 2008	0620	2
4	(a)) haematite (or any other correct ore) NOT: iron oxide		[1]	
	(b)	(i) ca	lcium carbonate/limestone/CaCO ₃		[1]
		(ii) C/	just above the iron		[1]
	(c)		$C + O_2 \rightarrow 2CO$ mark for O_2 ; 1 mark for O_2 0;		[2]
			isonous/toxic/kills you/deadly/suffocates you DT: harmful/causes breathing difficulties		[1]
	(d)	1 st and	3 rd boxes ticked		[1]
	(e)	Any two of: blast furnace can only be used for metals below zinc or carbon; aluminium is very reactive or high in the reactivity series or too reactive or higher then iron in the reactivity series; carbon cannot remove oxygen from aluminium oxide/carbon cannot displace aluminium;			
			ium above carbon in reactivity series or more reactive ch heat required for carbon to remove oxygen from a		marks [2]
	(f)	(i) ele	ectrolysis		[1]
		(ii) air	craft bodies/car bodies/(overhead) power cables/drinl	ks cans/window fra	mes etc. [1]

[Total: 11]

Page 5	Mark Scheme	Syllabus	Paper
	IGCSE – October/November 2008	0620	2

(a)	 (i) temperature of the water rises/heat given to the water/heat or energy given out/the thermometer reading goes up 		[1]	
	(ii)	carbon dioxide + water (1 mark each)	[2]	
(b)	(b) any two from coal/natural gas/wood/paraffin/any other suitable fuel containing carbon ALLOW: named alcohols (except ethanol) NOT: alkenes/named alkenes/naphtha		[2]	
(c)	(c) OH/–OH NOT: complete formula for ethanol			
(d)		e cobalt chloride (paper); turns pink white/anhydrous copper sulphate; turns blue	[2]	
(e) (i) (ii)		painting/galvanising/covering with plastic/sacrificial protection/(electro)plating ALLOW: oiling/greasing NOT: removing air/removing water	[1]	
		contains water NOT: dissolves in water	[1]	
	(iii)	Any two of: high boiling point or melting point; can act as catalyst; forms coloured compounds; high density; compounds can have variable oxidation states or have ions with different charges; ALLOW: general metallic properties e.g. conducts electricity; conducts heat; ductile etc. NOT: not very reactive	[2]	

[Total: 12]

5

Page 6	Mark Scheme	Syllabus	Paper
	IGCSE – October/November 2008	0620	2

6 (a) Any two of;

(group of similar organic) compounds with same chemical properties; (group of similar organic) compounds showing trend in physical properties;

have same functional group;

have same general formula;

members differ by CH₂ group;

ALLOW: can be made by same method

[2]

(b) ethane;

correct structure of ethane;

[2]

ALLOW: correct structure from incorrectly named alkane

(c) 1st row

correct structure of ethene;

use e.g. for making plastics/ethanol etc.;

[2]

correct structure of ethanoic acid;

[1]

3rd row C₂H₄Br₂;

[1]

4th row methane;

fuel;

[2]

(d) 188
ALLOW: error carried forward from incorrect structure in the table

[1]

[Total: 11]

rage r			Wark Scheine	Syllabus	i apei	
			IGCSE – October/November 2008	0620	2	
,	(a) (i)	ions	cannot move in solid; move when molten;			[2]
	(ii)	force ALLO parti chlor easi	ium has atoms/particles closely packed together es between particles/particles can't move; OW: calcium has high boiling point (because cles) rine has molecules/particles randomly arranged/fally (from place to place); OW: chlorine has low boiling point (because of weak	of strong forces	between	[2]
	(b) (i)		·	ıy round		[2]
	(ii)	grap	hite/carbon			[1]
	(iii)		revent it from reacting with the air/oxygen OW: does not react/prevents (other) reactions (with	calcium)		[1]
	(iv)	•	noble gas OW: nitrogen			[1]
			um hydroxide ecipitate; insoluble in excess;			[2]
