CENTRE NUMBER				ANDIDA UMBER					
CHEMISTRY								062	20/22
Paper 2					Oct	ber/N	lover	nber	2012

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may need to use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

A copy of the Periodic Table is printed on page 16.

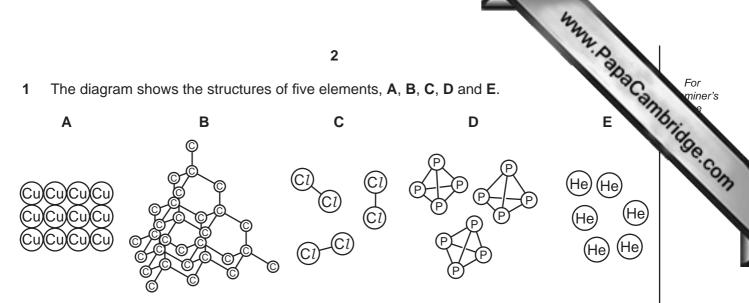

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use

This document consists of 14 printed pages and 2 blank pages.

(a) Answer these questions using the letters A, B, C, D or E. Each element can be used once, more than once or not at all.

Which one of these elements

	(i)	is in Group V of the Periodic	c Table,		[1]				
	(ii)	is used to fill weather balloo	ons,		[1]				
	(iii)	is a diatomic gas at room temperature,[1							
	(iv)	conducts electricity,[1							
	(v)	is a transition element?			[1]				
			and	escribe the structure of eleme					
		covalent	giant	ionic					
		metallic	simple atomic	simple molecular					
			and		[2]				
(d)		at do you understand by the			[41				

[Total: 10]

2	Ammonia,	NH _a .	is an	alkaline	gas.
_	, uninitionia,	1 11 12,	io aii	antamio	guo

1	a	1	Des	cribe	а	test	for	amm	onia
۱	a	,	Des	CHIDE	а	ισσι	101	allilli	unia

test	 	 	 	
result				[2]

(b) What is the pH of an aqueous solution of ammonia? Put a ring around the correct answer.

pH1 pH3 pH5 pH7 pH9 [1]

(c) Ammonia reacts with hydrochloric acid.

(i) Complete the symbol equation for this reaction.

$$NH_3 + HCl \rightarrow \dots$$
 [1]

(ii) Hydrochloric acid can be made by dissolving hydrogen chloride, HCl, in water. Draw a diagram to show the arrangement of electrons in hydrogen chloride. Show only the outer electrons.

Show a hydrogen electron as • Show a chlorine electron as **x**

(d) Aqueous ammonia reacts with sulfuric acid to form a solution of ammonium sulfa-

 $2NH_{3}(aq) + H_{2}SO_{4}(aq) \rightarrow (NH_{4})_{2}SO_{4}(aq)$

www.PapaCambridge.com (i) Ammonium sulfate is a colourless salt. Describe how you could use a titration method to make a colourless solution of ammonium sulfate.[4] (ii) How can crystals of ammonium sulfate be obtained from a solution of ammonium sulfate? [Total: 11]

The table below shows the properties of some halogens.

			7
		5	
elow shows	the properties of	some halogens.	
halogen	colour	state at room temperature	melting point /°C
fluorine	yellow		-220
chlorine	light green	gas	
bromine	brownish-red	liquid	-7
iodine	grey-black	solid	+114

(a)	(i)	What is the trend in the co	olour of the halogens down the Group?							
,	•	[1]								
((ii) Predict the state of fluorine at room temperature.									
((iii) Predict the melting point of chlorine.									
			[1]							
	(b) The reactivity of three different halogens was compared by reacting them with solutions of sodium halides. The results are shown in the table below.									
		reaction mixture	observations							
	а	astatine + sodium iodide	colour of reaction mixture remains unchanged							
	b	oromine + sodium iodide	mixture turns dark brown							
	ch	nlorine + sodium bromide	mixture turns brownish-red							
	(i) Use the results in the table to suggest the order of reactivity of astatine, bromine, chlorine and iodine.									
mo	st r	eactive ———	→ least reactive							
	(ii)	Predict whether bromine Explain your answer.	[2] will react with sodium chloride solution.							
	[1]									

www.PapaCambridge.com (c) Chlorine reacts with excess cold dilute sodium hydroxide. The products of the are sodium chloride, sodium chlorate(I) and water.

The formula of sodium chlorate(I) is NaClO.

Complete the equation for this reaction.

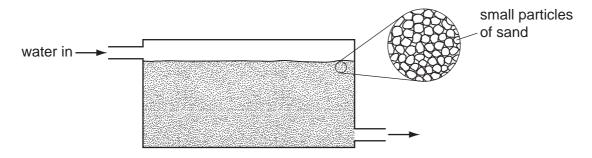

$$Cl_2$$
 +NaOH \rightarrow NaC l + NaC l O +

[2]

(d) (i) Explain why chlorine is used in water purification.

.....[1]

(ii) Impure water contains particles of minerals and remains of dead plants and animals. One stage in water purification is the removal of these particles by filtration. The diagram below shows a water filter.

Explain how this water filter works.

[2]

[Total: 11]

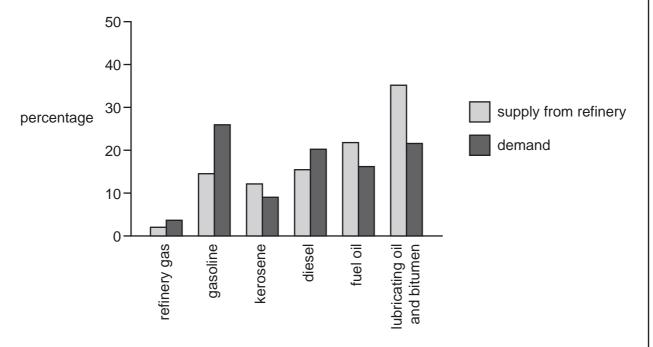

The process of distillation is used in an oil refinery to separate petroleum into fractions.

(a)	What do	you understand	by the term	petroleum	fraction?
\ - ·		,	-)	1

What do you understand by the term petroleum fraction?	Tage C
	···· Vin
	[2]

(b) Some petroleum fractions are more useful than others. There is a greater demand for these fractions.

The diagram shows the demand from customers and the ability of an oil refinery to supply these fractions by fractional distillation alone.

(i) State the name of **two** fractions for which demand is greater than supply.

(ii) State **one** use for each of the following fractions.

refinery gas

(c) More gasoline can be made by cracking long-chain hydrocarbons.

State the conditions needed for cracking.

 	 	[2]

			8			10
(d)	Doo	decane, C ₁₂ H ₂₆ , can be cra	acked to form sma	ller hydrocarb	ons.	. Papacar
	(i)	What do you understand	by the term <i>hydro</i>	ocarbon?		
						[1]
	(ii)	Complete the equation for	or the cracking of	dodecane.		
		C ₁₂ l	$H_{26} \rightarrow C_8 H_{18} +$			[1]
(e)	Eth	ene, C ₂ H ₄ , can be formed	by cracking.			
	(i)	Draw the full structure of	ethene showing a	all atoms and I	oonds.	
						[1]
	(ii)	Poly(ethene) can be made Complete the following s		ords from the	list below.
