CHEMISTRY 0971/41

Paper 4 Theory (Extended)

May/June 2019

1 hour 15 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

#### **READ THESE INSTRUCTIONS FIRST**

Write your centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

Electronic calculators may be used.

A copy of the Periodic Table is printed on page 16.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

This document consists of 13 printed pages and 3 blank pages.

**Z** is a covalent substance. In an experiment, a sample of pure solid **Z** was continually heated for 11 minutes.

The graph shows how the temperature of the sample of pure **Z** changed during the first 9 minutes.

| ı | (2) | What is  | tho  | molting | noint | Ωf | nuro | 72         |
|---|-----|----------|------|---------|-------|----|------|------------|
| ١ | laı | vviiatis | เมเต | HIGHIN  | DOILL | Οı | Duic | <b>~</b> : |

| °C | [1] |
|----|-----|
|----|-----|

**(b)** The sample of pure **Z** began to boil at 9 minutes. It was boiled for 2 minutes.

Use this information to sketch on the grid how the temperature of the sample of pure **Z** changed between 9 minutes and 11 minutes. [1]

(c) The sample of pure **Z** was continually heated between 2 minutes and 5 minutes.

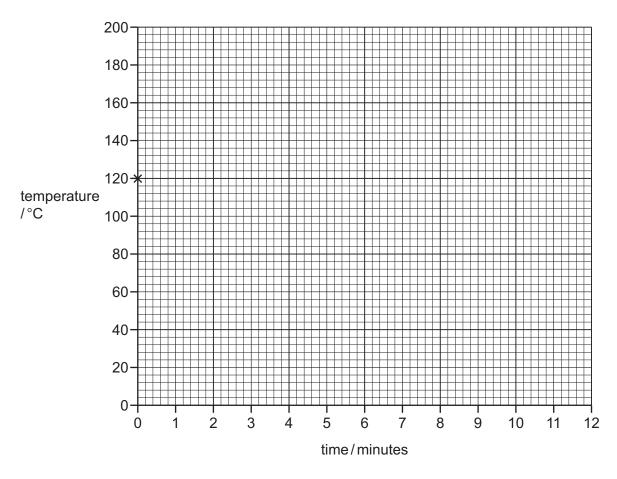

| Explain, in terms of attractive forces, why there was no in | icrease in the temperature of the |
|---|-----------------------------------|
| sample of pure <b>Z</b> between 2 minutes and 5 minutes.    |                                   |
|   |                                   |
|   |                                   |
|   |                                   |

.....[

| (d) | Describe how the motion of particles of pure <b>Z</b> changed from 0 minutes to 2 minutes.   |
|-----|--|
|     | [2]  |
| (e) | The experiment was repeated using a solid sample of <b>impure Z</b> .  |
|     | Suggest the differences, if any, in the melting point and boiling point of the sample of impure <b>Z</b> compared to the sample of pure <b>Z</b> . |
|     | melting point  |
|     | boiling point  |
|     | [2]  |

(f) A sample of pure **Z** was allowed to cool from 120 °C to 20 °C. The total time taken was 8 minutes.

Starting from point  $\mathbf{x}$ , sketch on the grid how the temperature of the sample of pure  $\mathbf{Z}$  changed between 0 minutes and 8 minutes.

[Total: 10]

- **3** Zinc and copper are elements next to each other in the Periodic Table.
  - (a) Zinc is obtained from zinc blende in a two-step process.
    - In step 1, zinc blende is converted into zinc oxide.
    - In **step 2**, zinc oxide is converted into zinc in a blast furnace.

Outline how each of these steps are done.

| In your answe |
|---------------|
|---------------|

- give one chemical equation for each step
- describe how zinc is removed from the blast furnace in step 2.

|     | step 1   |

Magnesium carbonate reacts with hydrochloric acid to produce magnesium chloride.

$$MgCO_3 + 2HCl \rightarrow MgCl_2 + H_2O + CO_2$$

A student used 50.00 cm³ of 2.00 mol/dm³ hydrochloric acid in an experiment to produce magnesium chloride.

Calculate the mass, in g, of magnesium carbonate needed to react exactly with 50.00 cm³ of 2.00 mol/dm³ hydrochloric acid using the following steps.

| • | Calculate the number | of moles of HC1 | present in 50.00 cm <sup>3</sup> | of 2.00 mol/dm3 HC3 |
|---|----------------------|-----------------|----------------------------------|---------------------|
|---|----------------------|-----------------|----------------------------------|---------------------|

|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|------|
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 1110 |

• Determine the number of moles of  $MgCO_3$  which would react with  $50.00\,\mathrm{cm^3}$  of  $2.00\,\mathrm{mol/dm^3}\,\mathrm{HC}\mathit{l}$ .

• Calculate the relative formula mass,  $M_r$ , of MgCO<sub>3</sub>.

$$M_{\rm r}$$
 of MgCO<sub>3</sub> = .....

• Calculate the mass of MgCO<sub>3</sub> needed to react exactly with 50.00 cm<sup>3</sup> of 2.00 mol/dm<sup>3</sup> HC*l*.

[4]

| (d) |       | student prepares crystals of magnesium chloride by adding an excess of gnesium carbonate to 50.00 cm³ of 2.00 mol/dm³ hydrochloric acid.  |
|-----|-------|---|
|     | The   | e student filters the mixture and rinses the residue.   |
|     | (i)   | Why does the student add an <b>excess</b> of magnesium carbonate?   |
|     |       | [1]   |
|     | (ii)  | Why does the student rinse the residue?   |
|     |       | [1]   |
|     | (iii) | Describe how the student would obtain pure crystals of magnesium chloride from the filtrate.  |
|     |       |   |
|     |       |   |
|     |       | [3]   |
| (e) |       | ver chloride, $AgCl$ , is insoluble. It can be made by a precipitation reaction between aqueous ium chloride and a suitable aqueous silver salt.  |
|     | (i)   | What is meant by the term <i>precipitate</i> ?  |
|     |       |   |
|     |       | [2]   |
|     | (ii)  | Name a suitable silver salt to use to prepare silver chloride. Complete the chemical equation to show the formation of insoluble silver chloride from aqueous barium chloride and the silver salt you have named. |
|     |       | name of a suitable silver salt  |
|     |       | $BaCl_2 + \dots \rightarrow \dots + \dots $   |
|     |       | [Total: 22]   |

5 The structures of five alkenes, **A**, **B**, **C**, **D** and **E**, are shown.

|     | $\begin{array}{cccccccccccccccccccccccccccccccccccc$  |       |
|-----|---|-------|
|     | $\begin{array}{cccccccccccccccccccccccccccccccccccc$  |       |
| (a) | What is the general formula of alkenes?   |       |
|     |   | . [1] |
| (b) | What is the molecular formula of alkene <b>D</b> ?  | . [1] |
| (c) | Predict which alkene, <b>A</b> , <b>B</b> , <b>C</b> , <b>D</b> or <b>E</b> , has the highest boiling point. Explain your answer. |       |
|     | alkene  |       |
|     | explanation   |       |
|     |   | [2]   |

(d) Which alkene, **A**, **B**, **C**, **D** or **E**, diffuses most quickly? Explain your answer.

| alkene      |      |      |  |

[2]

(e) A student added aqueous bromine to alkene C.

Describe the colour change seen and draw the structure of the product. Show all of the atoms and all of the bonds.

colour change from ...... to .....

structure

[2]

(f) Two different alcohols can be produced from alkene **B** by an addition reaction.

(i) Draw the structures of the **two** alcohols. Show all of the atoms and all of the bonds.

[2]

[3]

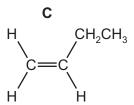

(ii) State the reagent and conditions needed to produce an alcohol from alkene B.

reagent .....

conditions .....

.....

(g) Alkene C can be converted into a polymer.

(i) What type of polymerisation occurs?

.....[1]

(ii) Suggest the name of the polymer formed.

.....[1]

(iii) Complete the chemical equation to show this polymerisation.

[3]

(iv) State the empirical formula of the polymer formed.

.....[1]
