Paper 2

October/November 2004

1 hour 15 minutes

Candidates answer on the Question Paper. No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in. Write in dark blue or black pen in the spaces provided on the Question Paper. You may use a soft pencil for any diagrams, graphs, tables or rough working. Do not use staples, paper clips, highlighters, glue or correction fluid.

Answer all questions.

The number of marks is given in brackets [] at the end of each question or part question.

A copy of the Periodic Table is printed on page 12.

If you have been given a label, look at the details. If any details are incorrect or missing, please fill in your correct details in the space given at the top of this page.

Stick your personal label here, if provided.

www.papaCambridge.com 1 Fig. 1.1 shows a current carrying coil in a magnetic field. There is a force of 5.0 N side of the coil acting as shown.

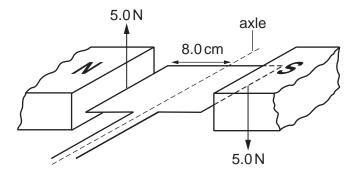

Fig. 1.1

(a) (i) Calculate the moment about the axle produced by the force on the right hand side of the coil. Show your working and state the unit.

moment =

(ii) Write down the moment about the axle produced by the force on the left hand side of the coil.

.....

(iii) Calculate the total moment on the axle.

moment =[5]

(b) (i) State the effect on the total moment about the axle of increasing the current in the coil.

(ii) State the effect on the total moment about the axle of decreasing the number of turns of wire in the coil.

.....[2]

(c) Name a device or a piece of apparatus which relies on the turning effect on a coil in a magnetic field.

ı	1100

- Using a microscope, the small drops of fat in milk can be seen moving about slow 2 random way. (a) Name this type of movement.
 - (b) Use words from the list below to complete the sentences describing this type of movement. You may use each word once, more than once or not at all.

collide	combine	electrons	larger	molecules	smaller	
The	of w	ater are movir	ng about qu	uickly. They	with	n the
drops of fat. The drops of fat move slowly because they are much than						
the	of wat	er.				[4]

[4]

3 Fig. 3.1 shows a hot water system for a house.

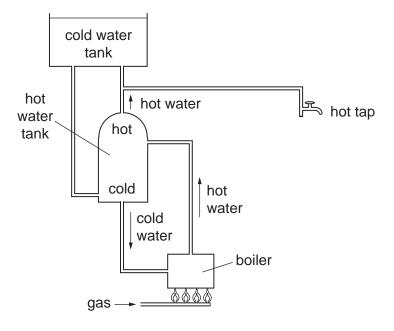

Fig. 3.1

(a)	(1)	Name the main process by which hot water rises from the boiler to the hot water tank.
	(ii)	Explain why this process occurs.
		[3]
<i>(</i> 1.)		
(b)	(i)	Name the main process by which the energy is transferred through the boiler wall to the water.
	(ii)	Complete the sentences below, which describe the energy changes as the gas is burnt.
		When the gas is burnt energy of the gas is converted into
		energy which raises the temperature of the water. The combustion
		process is an change. [4]
(c)		nergy is lost from the hot water tank causing the water to cool. Suggest a way in which is loss could be minimised.
		[1]

For Examiner's Use

4 A student uses paper chromatography to investigate three substances, **X**, **Y** and **Z**.

The result of her experiment in Fig. 4.1 shows three components, **P**, **Q** and **R**.

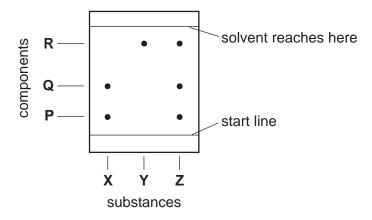

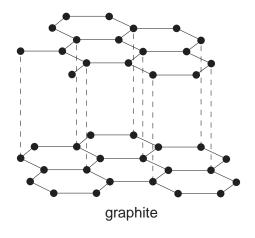

Fig. 4.1

(a)	State and explain which substance is a mixture of the other two.	
(b)	State and explain which component is most soluble in the solvent.	[∠]
		[2]

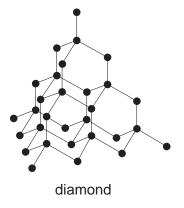

Fig. 5.1

6

Use the information in Fig. 5.1 to describe the structures of

	(i)	gra	phite,
	/ii\		[2]
	(ii)		nond.
			[2]
6	(a)	(i)	Describe how a potassium atom, K, forms a potassium ion.
		(ii)	Describe how an iodine atom, I, forms an iodide ion.
			[1]
	(b)	Her	nce describe how potassium iodide is formed from potassium and iodine.

For Examiner

7 Fig. 7.1 shows a circuit being used to light two identical bulbs.

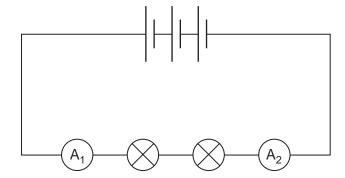

Fig. 7.1

Ammeter A_1 reads 0.75 A and the potential difference across the **two** bulbs is 4.5 V.

- (a) (i) What is the reading on ammeter A₂? A
 - (ii) Calculate the total resistance in the circuit. Show your working and state the unit.

resistance =

(iii) What is the resistance of one bulb?

resistance =[5]

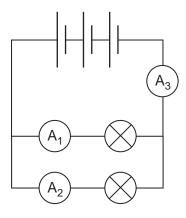

Fig. 7.2

Fig. 7.2 shows another circuit which could be used to light the two bulbs.

Both ammeter A_1 and ammeter A_2 read 1.5 A.

- **(b)** What would ammeter A₃ read? A [1]
- (c) Explain whether the bulbs would be brighter in the circuit in Fig. 7.1 or Fig. 7.2.

		Way.	
		aturated hydrocarbon gas is given off from decaying rubbish. One molecule of this hydrocarbon contains one carbon atom and four hydrogen atom (i) Write the molecular formula of this hydrocarbon	1

	(a)	One molecule of this hydrocarbon contains one carbon atom and four hydrogen atom	1
		(i) Write the molecular formula of this hydrocarbon	[1]
		(ii) Use the information in the Periodic Table on page 12 to calculate the relation molecular mass, $M_{\rm r}$, of this hydrocarbon.	ve
		$M_{\rm r} = \dots $	[1]
	(b)	This gas burns completely in air to form carbon dioxide and water.	
		hydrocarbon gas + oxygen $ ightarrow$ carbon dioxide + water	
		Construct a balanced chemical equation for this reaction.	
		[[2]
	(a)	Copper oxide heated in hydrogen forms copper and water.	
		Use this example to explain the meaning of <i>reduction</i> .	
			[2]
	(b)	State two properties of copper that show this metal is a transition element.	
		1	
		2	[2]
)		udent prepares magnesium sulphate by adding pieces of magnesium to dilute sulphur until there is excess magnesium and the reaction stops.	ric
	(a)	Describe how the student can obtain crystals of magnesium sulphate from the mixtu of aqueous magnesium sulphate and excess magnesium.	ire
			[2]
	(b)	Hydrogen is also produced in the first experiment.	
		Describe a test to identify this gas.	
		test	
		result	[2]

Fig. 11.1 shows a beam of light being shone on a pond.

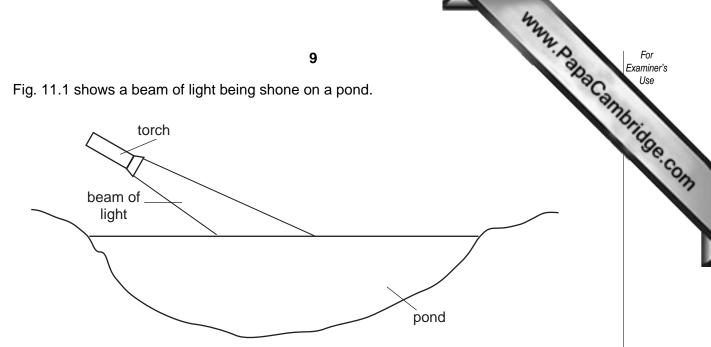

Fig. 11.1

- (a) (i) Complete the two rays, which mark the edges of the beam of light, to show the path of the beam after it enters the water.
 - (ii) For one of the rays, mark the angle of incidence and label it i.
 - (iii) Name the effect that this experiment demonstrates.

				[2]

14 (a) Draw the structures of ethane, C₂H₆, and ethene, C₂H₄. Show all the atoms and bonds.

ethane ethene

				[2]
	(b)		in why alkenes, such as ethene, do react with steam whereas alkanes, such e, do not react with steam.	as
				[2]
15	The	isoto	be $^{90}_{38}$ Sr is a radioactive isotope which emits β -particles.	
	(a)	(i)	Explain what is meant by the term <i>isotope</i> .	
				[2]
		(ii)	Explain what a eta -particle is.	
				[2]
	(b)	(i)	Complete the table in Fig. 15.1 which describes the make up of a neutral atom of $^{90}_{38}$	Sr.
			Number of protons	
			Number of neutrons	
			Number of electrons	

Fig. 15.1

(ii)	Which type of particle, listed in Fig. 15.1, is not found in the nucleus of an	atom?
		[4

(c) Complete the equation below which describes the decay of $^{90}_{38}{\rm Sr}.$

$$^{90}_{38}$$
Sr $\longrightarrow ^{90}$ Y + $^{\cdots}_{-1}\beta$ + energy [2]
