Paper 5 Practical Test

May/June 2021

MARK SCHEME

Maximum Mark: 60

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2021 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

This document consists of **12** printed pages.

PUBLISHED**Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

PUBLISHED**Science-Specific Marking Principles**

1	Examiners should consider the context and scientific use of any keywords when awarding marks. Although keywords may be present, marks should not be awarded if the keywords are used incorrectly.
2	The examiner should not choose between contradictory statements given in the same question part, and credit should not be awarded for any correct statement that is contradicted within the same question part. Wrong science that is irrelevant to the question should be ignored.
3	Although spellings do not have to be correct, spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. ethane / ethene, glucagon / glycogen, refraction / reflection).
4	The error carried forward (ecf) principle should be applied, where appropriate. If an incorrect answer is subsequently used in a scientifically correct way, the candidate should be awarded these subsequent marking points. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.
5	<p><u>'List rule' guidance</u></p> <p>For questions that require <i>n</i> responses (e.g. State two reasons ...):</p> <ul style="list-style-type: none">• The response should be read as continuous prose, even when numbered answer spaces are provided.• Any response marked <i>ignore</i> in the mark scheme should not count towards <i>n</i>.• Incorrect responses should not be awarded credit but will still count towards <i>n</i>.• Read the entire response to check for any responses that contradict those that would otherwise be credited. Credit should not be awarded for any responses that are contradicted within the rest of the response. Where two responses contradict one another, this should be treated as a single incorrect response.• Non-contradictory responses after the first <i>n</i> responses may be ignored even if they include incorrect science.

6 Calculation specific guidance

Correct answers to calculations should be given full credit even if there is no working or incorrect working, **unless** the question states 'show your working'.

For questions in which the number of significant figures required is not stated, credit should be awarded for correct answers when rounded by the examiner to the number of significant figures given in the mark scheme. This may not apply to measured values.

For answers given in standard form (e.g. $a \times 10^n$) in which the convention of restricting the value of the coefficient (a) to a value between 1 and 10 is not followed, credit may still be awarded if the answer can be converted to the answer given in the mark scheme.

Unless a separate mark is given for a unit, a missing or incorrect unit will normally mean that the final calculation mark is not awarded. Exceptions to this general principle will be noted in the mark scheme.

7 Guidance for chemical equations

Multiples / fractions of coefficients used in chemical equations are acceptable unless stated otherwise in the mark scheme.

State symbols given in an equation should be ignored unless asked for in the question or stated otherwise in the mark scheme.

Examples of how to apply the list rule

State **three** reasons... [3]

A	1. Correct	✓	2
	2. Correct	✓	
	3. Wrong	✗	

B (4 responses)	1. Correct, Correct	✓, ✓	3
	2. Correct	✓	
	3. Wrong	ignore	

C (4 responses)	1. Correct	✓	2
	2. Correct, Wrong	✓, ✗	
	3. Correct	ignore	

D (4 responses)	1. Correct	✓	2
	2. Correct, CON (of 2.)	✗, (discount 2)	
	3. Correct	✓	

E (4 responses)	1. Correct	✓	3
	2. Correct	✓	
	3. Correct, Wrong	✓	

F (4 responses)	1. Correct	✓	2
	2. Correct	✓	
	3. Correct CON (of 3.)	✗ (discount 3)	

G (5 responses)	1. Correct	✓	3
	2. Correct	✓	
	3. Correct Correct CON (of 4.)	✓ ignore ignore	

H (4 responses)	1. Correct	✓	2
	2. Correct	✗	
	3. CON (of 2.) Correct	(discount 2) ✓	

I (4 responses)	1. Correct	✓	2
	2. Correct	✗	
	3. Correct CON (of 2.)	✓ (discount 2)	

Question	Answer	Marks
1(a)(i)	clear and continuous outline with single line, correct shape ; greater than half the box ; detail – crinkly outer edge and circles ;	3
1(a)(ii)	line to circle labelled X ;	1
1(a)(iii)	transport of water / red colour ;	1
1(b)(i)	axes correct way round and labelled with quantity and units ; sensible linear scale chosen so points cover at least half of the grid ; plots correct \pm half small square ;	3
1(b)(ii)	best fit line ;	1
1(b)(iii)	correct reading from graph ; marking on graph ;	2
1(b)(iv)	as time increases distance increases ;	1

Question	Answer	Marks				
2(a)(i)	<table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td data-bbox="647 264 1626 330">observation</td> </tr> <tr> <td data-bbox="647 330 1626 395">yellow / green / orange / red ;</td> </tr> <tr> <td data-bbox="647 395 1626 461">blue ;</td> </tr> <tr> <td data-bbox="647 461 1626 526">brown / orange ;</td> </tr> </table>	observation	yellow / green / orange / red ;	blue ;	brown / orange ;	3
observation						
yellow / green / orange / red ;						
blue ;						
brown / orange ;						
2(a)(ii)	<table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td data-bbox="647 611 1626 676">conclusion</td> </tr> <tr> <td data-bbox="647 676 1626 742">contains <u>reducing</u> sugar</td> </tr> <tr> <td data-bbox="647 742 1626 807">does <u>not</u> contain protein</td> </tr> <tr> <td data-bbox="647 807 1626 873">does <u>not</u> contain starch</td> </tr> </table>	conclusion	contains <u>reducing</u> sugar	does <u>not</u> contain protein	does <u>not</u> contain starch	3
conclusion						
contains <u>reducing</u> sugar						
does <u>not</u> contain protein						
does <u>not</u> contain starch						
2(b)(i)	water <u>and</u> ethanol / alcohol	1				
2(b)(ii)	alcohol / ethanol is flammable	1				

Question	Answer	Marks
3(a)	(methyl orange) yellow in both boxes ; (HCl) bubbles in both boxes; limewater and carbon dioxide both boxes ; (MgCl ₂) colourless / no reaction ; white ppt ; (flame test) both yellow / orange ;	6
3(b)	add aqueous magnesium chloride (and white ppt with Na ₂ CO ₃ and not NaHCO ₃) ;	1

Question	Answer	Marks
4(a)	time for one result ; times for all 3 ; order large > small > powdered ;	3
4(b)	as surface area increases rate increases ;	1
4(c)	(gas) syringe ; volume in a certain time / time for a certain volume ;	2

Question	Answer	Marks
5	<p>At least 1 mark must come from each section</p> <p>apparatus container and thermometer; balance;</p> <p>method water into container and boil (to record bpt of pure water) ; add salt and (heat to) boil; minimum 5 amounts; safety goggles / gloves and boiling water and (burn / hurt) skin / hands / eyes ; repeat;</p> <p>measurements ; boiling point of pure water ; boiling point of water and salt ; mass of salt added / stated mass added ;</p> <p>control and process volume of water ; calculate average ;</p> <p>processing to use results to draw conclusions draw graph of mass / amount salt against boiling point ; pattern shown in graph described / as mass increases look for pattern in boiling temperature ;</p>	7

Question	Answer	Marks
6(a)(i)	I value recorded ; V value recorded ;	2
6(a)(ii)	I values < 1 A and to at least 2 decimal places ; V values < 2.5 V and to at least 1 decimal place ; V values decreasing ;	3
6(b)(i)	all P values correct; values to consistent significant figures/dp ;	2
6(b)(ii)	W / watt ;	1
6(b)(iii)	lamp gets dimmer (as l increases) ;	1
6(c)	(expect no / disagree) justification matches comment and refers to results ; e.g. l / V values not constant. / V decreases as l increases / V doesn't double as l doubles	1

Question	Answer	Marks
7(a)(i)	l_0 recorded to the nearest millimetre ;	1
7(a)(ii)	spring with no loops at the ends, carefully marked ;	1
7(b)(i)	l_M in millimetres and > l_0 ;	1
7(b)(ii)	e correct from candidates' values ;	1
7(c)(i)	l_A present and e_A correct ;	1
7(c)(ii)	m correct and correctly rounded ;	1

Question	Answer	Marks
7(d)	l_{Ω} present and $< l_A$ and e_{ω} correct ;	1
7(e)	$2.5 < d < 3.5$;	1
7(f)(i)	view perpendicularly to scale / rule close to spring / use a fiducial aid ;	1
7(f)(ii)	repeat measurements (and average) / clamp the rule vertically ;	1
