CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Advanced Level

www.PapaCambridge.com MARK SCHEME for the October/November 2013 series

9691 COMPUTING

9691/33

Paper 3 (Written Paper), maximum raw mark 90

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2013 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

D 0	Maula Oalaassa	O Hala
Page 2	Mark Scheme	Syllabus
	GCE A LEVEL – October/November 2013	9691

- 1 (a) (i) pq + 2 /
 - (ii) 6 3 5 p * + /

2nd mark for completely correct

- (b) Evidence for 6 and 2 [1] Final answer 3
- (c) (i) In-order traversal // (Traverse all subtrees in the order) left-root-right [1]
 - (ii) A 3.14 r 2 ^ * = [1]
 - (iii) Post-order traversal // (Traverse all subtrees in the order) left-right-root [1]

[Total: 8]

MAX 3

- 2 (a) Security is better managed
 Program-data independence // Changing a field does not require an applications program re-write
 Eetter managed data integrity/data validation // Validation code does not need to be present in all applications programs
 [1]
 Queries and reports quickly produced
 [1] If implemented with a DBMS it will allow concurrent access to the database
 [1] Reduced data duplication // data inconsistencies
 [1]
 - (b) (i) many cars are hired to many customers // many-to-many // M:m [1]
 - (ii) one depot has based there many cars // one-to-many // 1:M [1]

(c)

CAR

HIRE

CUSTOMER

Link table shown... [1] 2 X one-to-many relationships [1]

- (d) (i) (Yes) since there is a not a repeated group of attributes [1]
 - (ii) (Yes) Since there is only a single attribute primary key //
 There are no partial dependencies //
 All no-key attributes are dependant on the primary key
 [1]
 - (iii) Two of the non-key attributes are dependent //
 DepotManager and DepotAddress are dependent on DepotID [1]
