Paper 3 Advanced Theory

May/June 2015

1 hour 30 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

No calculators allowed.

## **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name in the spaces at the top of this page. Write in dark blue or black pen.

You may use an HB pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer all questions.

No marks will be awarded for using brand names of software packages or hardware.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

The maximum number of marks is 75.

This document consists of 14 printed pages and 2 blank pages.

www.PapaCambridge.com (a) A particular programming language allows the programmer to define their own define the define their own define their own define the define An example of a user-defined data type for an address is: TYPE ThisAddress DECLARE ThisHouseNo : INTEGER DECLARE ThisStreet : STRING DECLARE ThisTown : STRING

A variable of this new type is declared as follows:

ENDTYPE

DEC	CLARE HomeAddress : ThisAddress	
(i)	Write the statement that assigns the house number 34 to HomeAddress.	
		[1]
(ii)	The type definition for ThisAddress is to be changed.	
	Rewrite one line from the definition for each of the following changes.	
	House numbers are in the range from 1 to 10.	
	DECLARE	
	The possible towns are limited to: Brightown, Arunde and Shoram.	

www.PapaCambridge.com (b) Temperature data from a number of weather stations are to be processed by a p

The following data are to be stored:

- weather station ID (a unique four-letter code)
- latitude (to 2 decimal places)
- average temperature (to the nearest whole number) for each year from 2001 to 2015 inclusive

A programmer designs a composite data type WeatherStation. A variable of this type can be used to store all the data for one particular station.

(i)	Write the definition for the user-defined data type WeatherStation.
	[5]
(ii)	The programmer decides to store all the data in a file. The number of weather stations could grow to reach 20000, but not all stations will be present at first.
	The programmer decides on random organisation for the file.
	Describe <b>three</b> steps which show how a new weather station record is added to the file.
	1

6 A company grows vegetables in a number of large greenhouses. For the vegetables the temperature, light level and soil moisture need to always be within certain ranges.

www.PapaCambridge.com The company installs a computerised system to keep these three growing conditions within best ranges. Sensors are used for collecting data about the temperature, light level, and moisture content of the soil.

(a)	Nan	ne the type of system described.
/L\		
(b)		e <b>three</b> items of hardware that would be needed for this system. Justify your choice. not include sensors in your answer.
	Item	1 1
	Just	ification
		ification
	Item	1 3
	Just	ification
		[6]
(c)	(i)	Describe what is meant by feedback in the above system.
		[3]
	(ii)	When the system was designed, various parameters for temperature were set.
		Name <b>one</b> of these parameters.
		[1]
		III

(iii)	Explain how this parameter value is used by the feedback system.	-
		ź
		•
	[2]	

Question 6 continues on page 14.

Each greenhouse has eight sensors (numbered 1–8).

- The byte at address 150 is used to store eight 1-bit flags.
- A flag is set to indicate whether its associated sensor reading is waiting to be processed.
- More than one sensor reading may be waiting to be processed at any particular moment.
- Data received from the sensors is stored in a block of eight consecutive bytes (addresses 201–208).
- The data from sensor 1 is at address 201, the data from sensor 2 is at address 202, and so on.

	Sensor number							
	1	2	3	4	5	6	7	8
150	0	1	0	0	0	1	0	1
201	0	0	0	0	0	0	0	0
202	0	0	0	0	0	1	0	0
203	0	0	0	0	0	0	0	0
204	0	0	0	1	0	0	0	0
205	0	0	0	0	0	0	1	0
206	0	0	0	1	0	1	0	0
207	0	0	0	1	0	0	1	0
208	0	0	0	1	0	0	1	0

(d) (i	i)	Interpret the current reading for sensor 2.					
			[2				
(ii	i)	The accumulator is loaded with the data from location 150.					
		Write the assembly language i processed for sensor 6.	instruction to check whether there is a value waiting to be				
		LDD 150	// data loaded from address 150				
			[3
