#### **READ THESE INSTRUCTIONS FIRST**

Write your centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** the questions in the space provided. If additional space is required, you should use the lined page at the end of this booklet. The question number(s) must be clearly shown.

Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place in the case of angles in degrees, unless a different level of accuracy is specified in the question.

The use of a calculator is expected, where appropriate.

Results obtained solely from a graphic calculator, without supporting working or reasoning, will not receive credit.

You are reminded of the need for clear presentation in your answers.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 22 printed pages and 2 blank pages.

coordinates of the centroid of the region enclosed by $C$ , the line $x = 1$ and the $x$ -axis.

It is given that $y = \ln(ax + 1)$ , who for every positive integer $n$ ,	ere a is a positive constant.	Prove by mathematical induction that,
for every positive integer n,	$\frac{d^n y}{dx^n} = (-1)^{n-1} \frac{(n-1)! a^n}{(ax+1)^n}.$	[6]

3 The integral  $I_n$ , where n is a positive integer, is defined by

$$I_n = \int_{\frac{1}{2}}^1 x^{-n} \sin \pi x \, \mathrm{d}x.$$

(i)	Show that
